

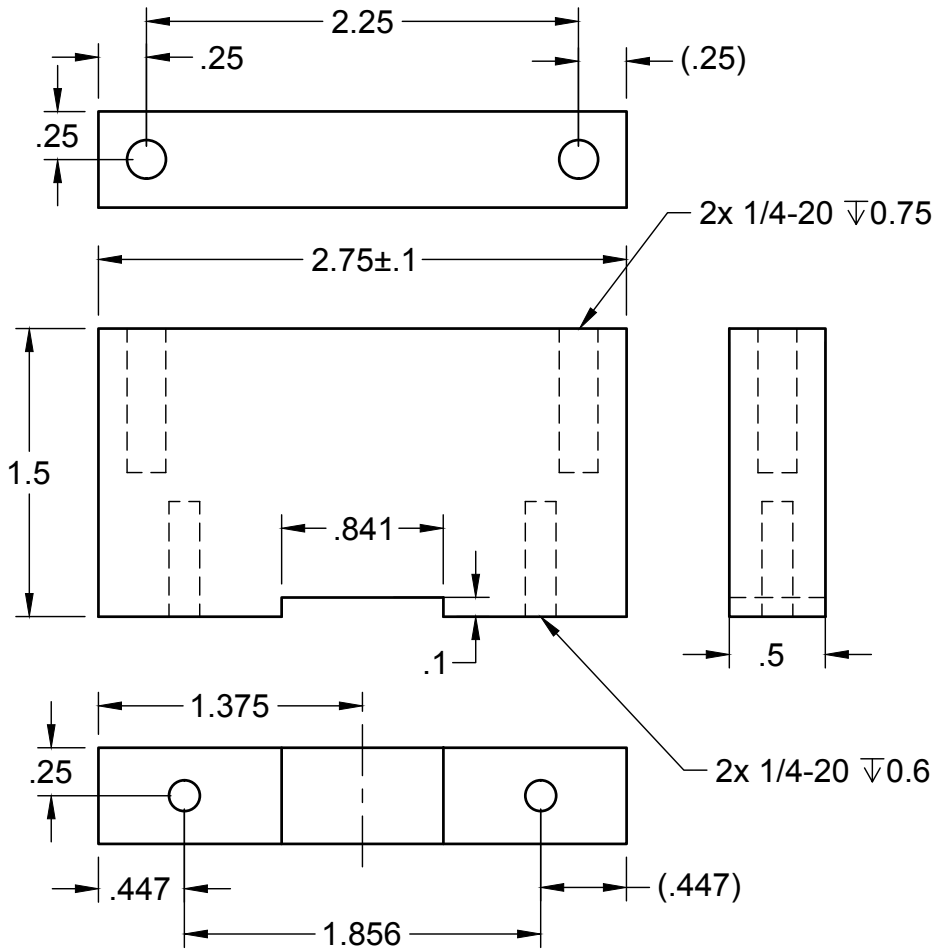
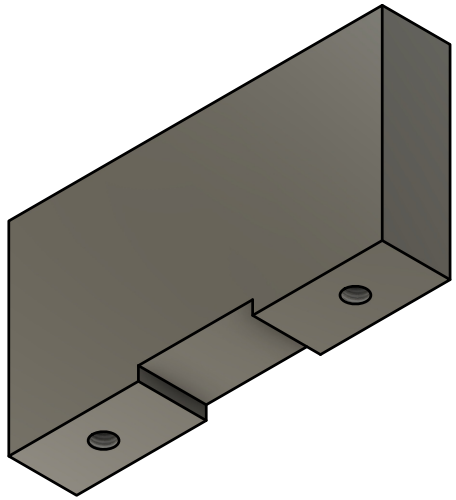
NOTE: Second base drawing provided for reference to better illustrate part's overall geometry without clutter of dimensions.

All tolerances ±0.01 unless otherwise specified.

NOTE: Most dimensions are given from center point of the plate. It would be wise to use the center as a zero when machining.

	PROJECT: RATS			
	TITLE: Base Plate			
APPROVED	SIZE: B	CODE	DWG NO	REV: 1
CHECKED				
DRAWN: Thomas Rimer 1/7/25	SCALE: 1:2	WEIGHT	SHEET: 1/1	





All tolerances ±0.01 unless otherwise specified.

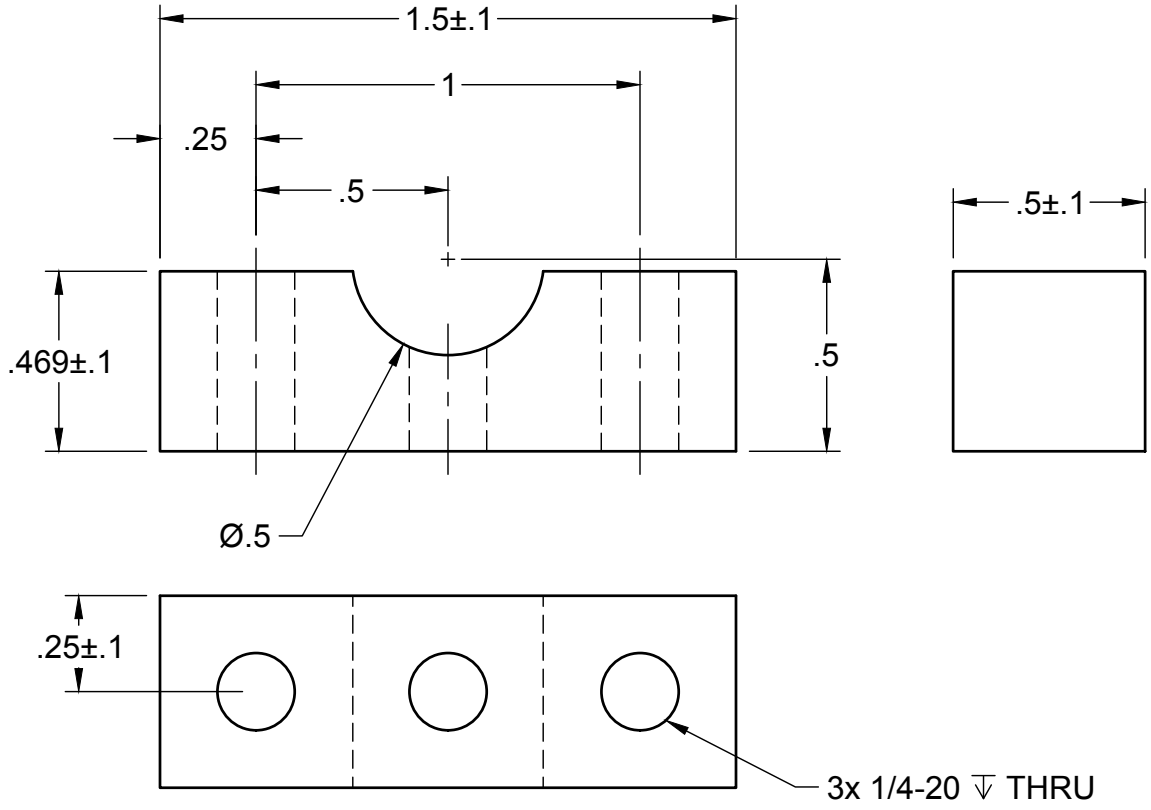
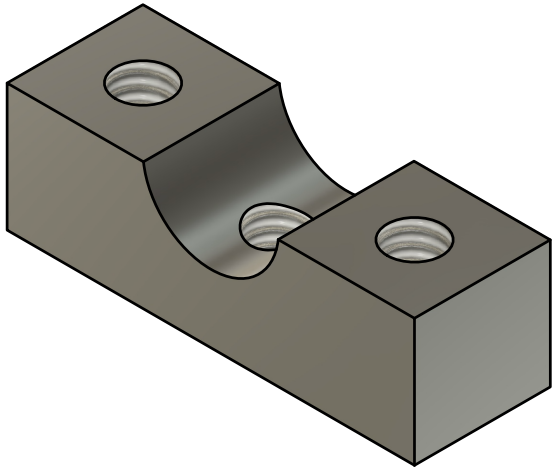
TITLE: Elevator Plate				
APPROVED	SIZE	CODE	DWG NO	REV
CHECKED	A			1
DRAWN Thomas Rimer 1/7/25	SCALE 1:2	WEIGHT		SHEET 1/1





NOTE: This part should be manufactured in conjunction with the "Horizontal Shaft Upper Mount". They should be machined from the same piece of $\frac{1}{2}$" aluminum bar, then cut in half with a $\frac{1}{8}$" blade yielding the top and bottom components.

All tolerances ±0.01 unless otherwise specified.

	PROJECT: RATS			
	TITLE: Horizontal Shaft Lower Mount			
APPROVED	SIZE: A	CODE	DWG NO	REV: 1
CHECKED				
DRAWN: Thomas Rimer 1/11/25	SCALE: 2:1	WEIGHT	SHEET: 1/1

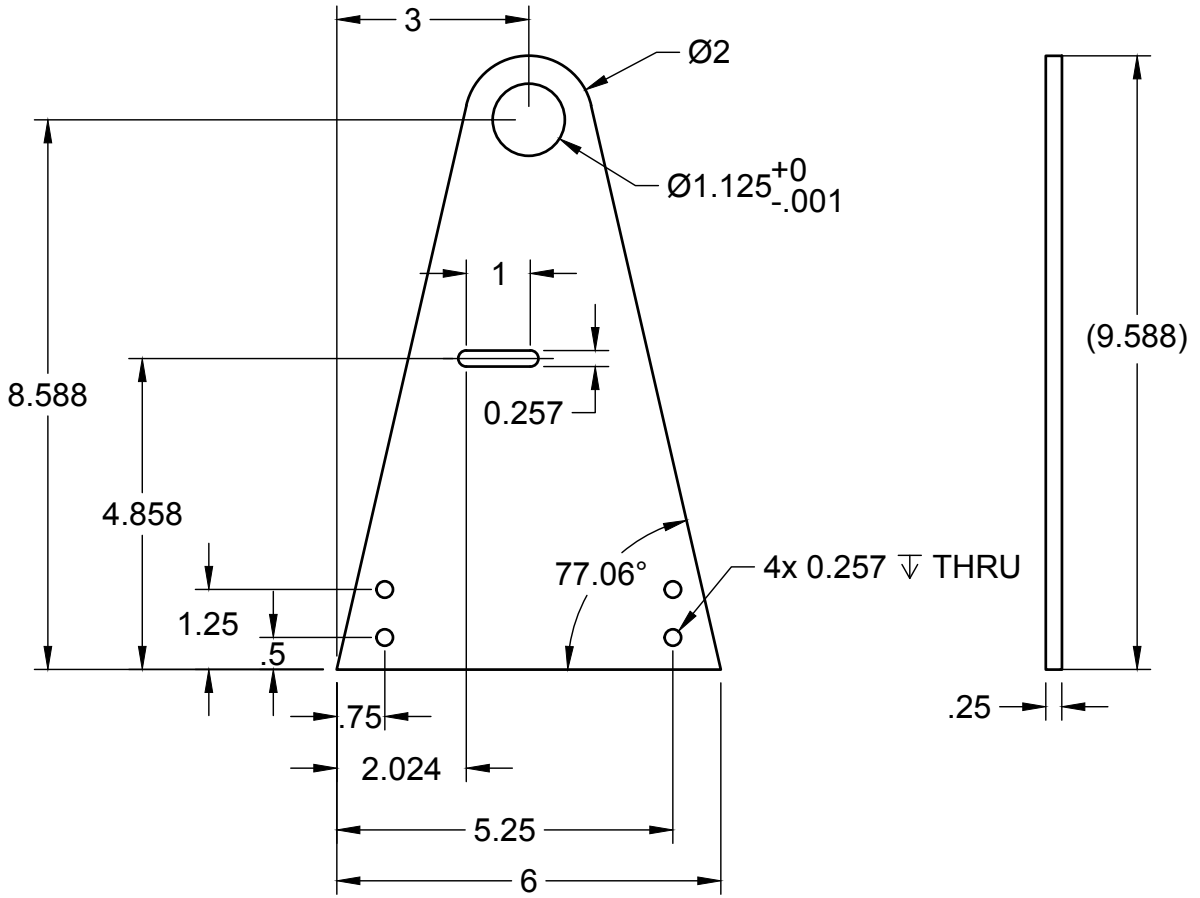
NOTE: Second base drawing provided for reference to better illustrate part's overall geometry without clutter of dimensions.

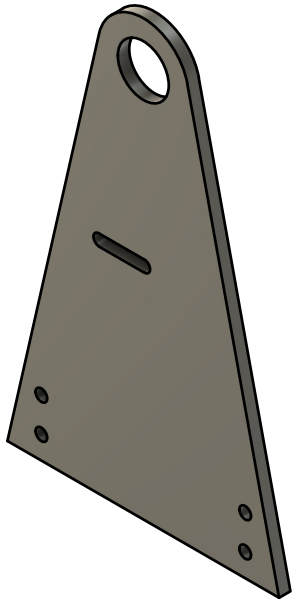
All tolerances ±0.01 unless otherwise specified.

NOTE: Most dimensions are given from center point of the plate. It would be wise to use the center as a zero when machining.

NOTE: The four holes closest to the center of the plate are countersunk, as indicated in the drawing. To reiterate, drive the tip of a 90° countersink 0.294" below the top of the plate.

	PROJECT: RATS			
	TITLE: Top Plate			
APPROVED	SIZE: B	CODE	DWG NO	REV: 1
CHECKED				
DRAWN: Thomas Rimer 1/7/25	SCALE: 1:2	WEIGHT	SHEET: 1/1	





NOTE: It's recommended to machine all features from a rectangular plate first. Add the angled sides and rounded top at the end. The angled side and rounded top can be foregone if machining proves too difficult.

All tolerances ±0.01 unless otherwise specified.
